

Master of Science Program in Integrative Medicine (International Program)

1. Program Name

Master of Science Program in Integrative Medicine (International Program)

2. Degree Awarded

Master of Science (Integrative Medicine)

3. Philosophy

The program embraces the integration of medical knowledge and interdisciplinary sciences with scientific advancement and innovation, emphasizing the harmonious balance of body, mind, and spirit to achieve sustainable integrative healthcare. The program also aims to cultivate independent scholars and innovative leaders with social responsibility, preparing graduates to become globally minded citizens dedicated to societal well-being and sustainable development.

4. Program Educational Objectives (PEOs)

The program aims to produce graduates who are able to:

- 1) Integrate medical sciences with other disciplines through the application of science and innovation to promote holistic health in harmony with nature and the balance of body, mind, and spirit.
- 2) Conduct research and develop innovative approaches in integrative medicine that effectively address societal health needs and contribute to sustainable healthcare development.
- 3) Apply and disseminate integrative medicine knowledge for self-care, community health promotion, and public benefit.
- 4) Demonstrate professional ethics, integrity, and responsibility in the practice and research of integrative medicine.

5. Career Opportunities

Graduates of the program may pursue careers such as:

- 1) Faculty members or lecturers in higher education institutions.
- 2) Academics, researchers, or scientists in academic, research, or healthcare organizations.
- 3) Licensed healthcare professionals practicing within the scope of their professional licensure while applying principles of integrative medicine.

- 4) Entrepreneurs or professionals in the health and wellness sector, in both public and private organizations.
- 5) Independent practitioners or self-employed professionals.

6. Program Learning Outcomes (PLOs)

Upon completion of the program, graduates will be able to:

Knowledge

PLO1: Apply knowledge of medical sciences and related scientific principles in conducting research.

PLO2: Design and develop research projects in integrative medicine.

Skills

PLO3: Effectively utilize information technology and digital resources to support learning and research activities.

PLO4: Apply concepts and principles of integrative medicine in research practice and knowledge generation.

Ethics

PLO5: Demonstrate ethical conduct, academic integrity, and professional responsibility in research practice.

Character

PLO6: Communicate academic information critically and effectively in diverse professional contexts.

PLO7: Demonstrate emotional maturity, professionalism, leadership, and appropriate interpersonal skills.
