

Doctor of Philosophy Program in Integrative Medicine (International Program)

1. Program Name

Doctor of Philosophy Program in Integrative Medicine (International Program)

2. Degree Awarded

Doctor of Philosophy (Integrative Medicine)

3. Philosophy

The program is committed to fostering independent intellectuals and producing high-quality research in health sciences. It aims to advance, extend, and devote efforts toward generating evidence-based value in integrative medicine, thereby promoting its recognition and contributing to the sustainable improvement of health and well-being in society and the global community.

4. Program Educational Objectives (PEOs)

The program aims to produce graduates who possess the following characteristics:

- 1) Demonstrate knowledge, competencies, and research skills, and be able to apply medical sciences and research findings to health promotion, disease prevention, treatment, and rehabilitation.
- 2) Be capable of designing, creating, and developing contemporary research and innovations in integrative medicine that effectively address the health needs of society.
- 3) Be able to appropriately and safely apply integrative medicine principles for the promotion, prevention, treatment, and rehabilitation of their own health and that of others.
- 4) Demonstrate positive attitudes toward integrative medicine and adhere to research ethics and professional integrity for the benefit, accuracy, and safety of the public.
- 5) Exhibit academic and professional leadership in integrative medicine that is responsive to societal and global changes.

5. Career Opportunities

Graduates of the program may pursue careers such as:

1. Faculty members or lecturers in higher education institutions.
2. Academics, researchers, or scientists in academic, research, or healthcare organizations.
3. Licensed healthcare professionals practicing within the scope of their professional licensure while applying principles of integrative medicine.
4. Entrepreneurs or professionals in the health and wellness sector, in both public and private organizations.
5. Independent practitioners or self-employed professionals.

6. Program Learning Outcomes (PLOs)

Upon completion of the program, graduates will be able to:

Knowledge

PLO1: Integrate and critically analyze knowledge from medical sciences and various medical disciplines to advance research.

PLO2: Develop and create research in integrative medicine.

Skills

PLO3: Appropriately utilize information technology for knowledge retrieval and research implementation.

PLO4: Communicate academic information critically, accurately, and credibly.

Ethics

PLO5: Demonstrate adherence to research ethics and integrity in research practice.

Character

PLO6: Demonstrate emotional maturity and responsibility toward oneself and society.

PLO7: Demonstrate academic leadership in the field of integrative medicine.
