

Launch of the Traditional Chinese Medicine Clinic at Thammasat University Hospital

On **22 April 2026**, the **Chulabhorn International College of Medicine (CICM)**, **Thammasat University**, in collaboration with **Thammasat University Hospital**, officially launched the **Traditional Chinese Medicine (TCM) Clinic** at Thammasat University Hospital. The initiative represents an important step toward developing a **university-based integrative medicine model** that connects Traditional Chinese Medicine, modern medicine, education, and clinical research.

The clinic provides **TCM services to hospital patients and the general public**, while also serving as a **clinical training platform for students in the Bachelor of Traditional Chinese Medicine (International Program)**. Students gain hands-on clinical experience in patient assessment and care under the supervision of qualified TCM practitioners and faculty members.

The clinic supports the development of specialized TCM services in areas such as **pain management, rehabilitation, women's health, and preventive healthcare**. It also provides a platform for integrating clinical practice with education and research, strengthening collaboration between TCM and modern healthcare within a university hospital setting.

The TCM Clinic is located on the **1st floor of the Nongyao Chaiseri Building, Thammasat University Hospital, Rangsit Campus**, and operates **Monday to Friday, from 8:30 a.m. to 4:30 p.m.**

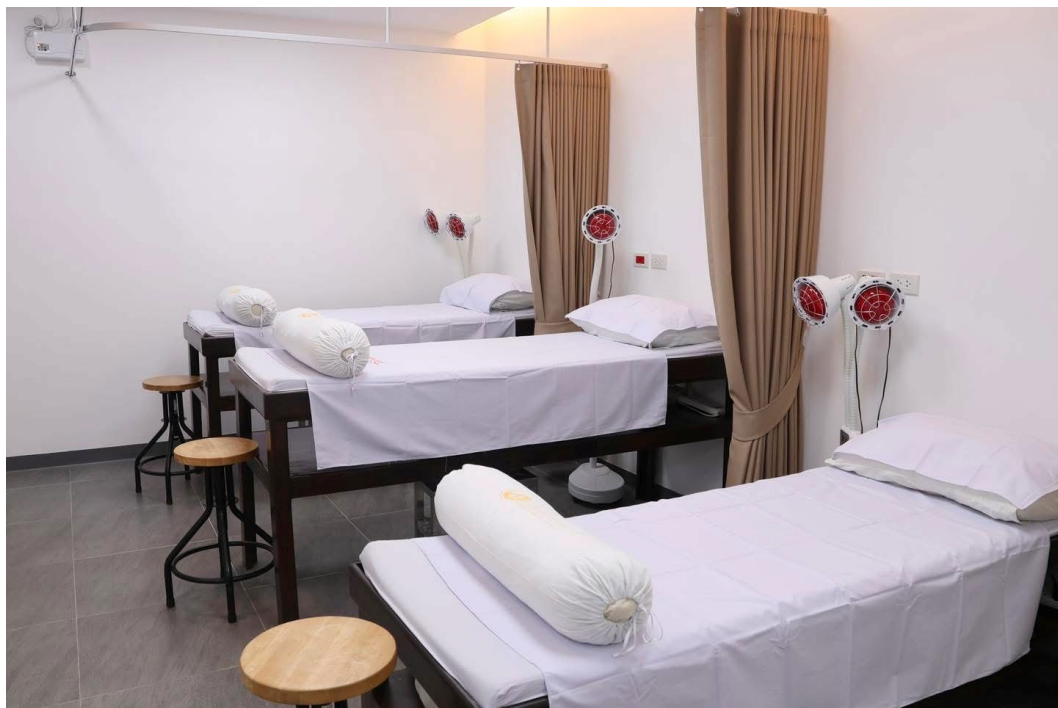

The establishment of the clinic demonstrates the collaboration between CICM and Thammasat University Hospital in translating academic expertise into clinical services, while strengthening **education, patient care, research, and integrative medicine development** within the university healthcare system.
